Contents

1 Updates

- configured csharp-mode (require 'csharp-mode), with several frequently used snippets, minor fixes.

- csharp-mode autocomplete && yasnippet work perfectly, except minor inconvenience in autopairing '{'.

- installed new csharp-mode package ~/.emacs.d/elpa/csharp-mode. old version has a '{' autopair "}}" problem. tried add autopair mode exceptions for csharp-mode pair '{' but does not work.

- installed new csharp-mode, while have to fix {} unformatted inconvenience.

- Don't understand emacs lisp indent and format {} theories (will try to understand later), so far walk around it by adding a csharp-mode snippet of Bracket, but I still have to type a RET after '{' in order to make it work. Want to skip the one more type of RET, will fix it sometime later when I understand lisp format {} later.

-

- Luck we have git, so after a reasonable amount of search, I checkout previous versions and got java-mode all back to work full functionally for autocomplete + yasnippet mode.

2 TODOs

- configure and organize emacs better so that it won't take too much time when initializing.
